DESCRIPTION OF TABLES AND GRAPHS

DATA TABLES

The following pages contain tables of the water consumptions and depths to the watertable for the sites monitored during the project. Each site is identified by the BHFILE number, which corresponds to the BH number given in Table 1 of this volume.

The original monthly records were processed and converted into average daily water consumptions in kilo-litres, given under the columns headed BCON and MUNCON.

The number of days in each monthly period is given under the heading PERIOD so that the total monthly municipal and groundwater consumptions can be calculated, if required.

The depth to the groundwater table in the borehole is given in metres under the heading WATERD. The depth was measured on the day of the record, which is indicated by the date given under the DAY, MONTH and YEAR headings in the tables.

The monthly records are numbered from 0 to 51. In some tables, erroneous and/or missing data has been omitted from the record and the spaces left blank.

FORMAT OF COMPUTER FILES

The tables data for the water consumptions and depths to the watertable of the sites monitored during the project are available on MS-DOS formatted disks as ASCII files. A description of the file format follows;

1. The files are named according to the borehole number and are prefixed with BH. The file extension is .PRN and the files are coded in ASCII. This makes it possible to import the data into a wide variety of software packages.
2. The fields in each data file are:

<u>Name</u>	<u>Columns</u>	<u>Type</u>	<u>Description</u>
RECORD	(1 -8)	I8	Refers to original data sheets or months
DAY	(9 -16)	I8	Day of month on which readings were taken
MONTH	(17-24)	I8	Month of readings
YEAR	(25-32)	I8	Year of readings
PERIOD	(33-40)	I8	Number of days since last reading
BHLPD	(41-48)	F8.3	Borehole Water Consumption - kilolitres/day
MUNLPD	(49-56)	F8.3	Municipal Water Consumption - kilolitres/day
WATERD	(57-64)	F8.4	Depth of water table from surface - metres

3. The first line of the file has BHFILE in columns 3 - 8 and the borehole reference numbers in columns 9 - 16.
4. The second line contains the field names.
5. The data records start at line 4. The number of the last record is always 51 but the number of the first record depend on when the site was first monitored.
6. Blank spaces in a field indicate NO DATA AVAILABLE. "Zero" can be taken as meaning no water consumption. There may be a few negative numbers that were missed in the data screening and these should be treated as BLANKS.
7. There are no records for borehole numbers 4, 5, 6, 9, 11, 12, 14 since these were dropped from the study at an early stage for various reasons.
8. Special cases: BH26 contains the combined data for Boreholes 26 and 27 at La Poloma flats. In analysing data for water consumption, disregard BH27.PRN which relates only to Borehole 27, but also contains the Municipal water consumption data.
9. The following sites, identified by borehole number, are not single family residential properties and the data should therefore be treated differently.

Flats, group housing	BH10, BH26 (+ BH27), BH43.
Schools	BH15, BH16
Church	BH58
Nursery	BH54

GRAPHICAL PRESENTATION OF DATA

The data given in the tables are presented graphically after the tables. The graphs were drawn using a commercial software package called HARVARD GRAPHICS. Copies of the data files are available in Harvard Graphics format if required. As before, the files are named according to the borehole number and are prefixed with BH and have been given the file extension .CHT.

TABLES OF GROUNDWATER DATA FOR PRETORIA
