

LINDA HARMS-SMITH

ACADEMIC LANGUAGE EDITING

BA (SW) M.SOC.SC B.SOC.SC (PSYCH) PHD

DATE: 18.09.2025

This letter confirms that academic language editing has been completed for the report titled:

Predicting and Modelling of Antibiotics Removal within the Urban Water Cycle Using Artificial Neural Networks and Adaptive Neuro-Fuzzy Inference System, submitted to the Water Research Commission by N. Seedat, M.K. Keitemoge, O.O. Sadare, and K. Moothi.

The document underwent comprehensive linguistic and structural review to ensure clarity, coherence, and adherence to academic and formatting standards. This process included editing for grammar, punctuation, stylistic consistency, and overall scholarly presentation. Referencing was checked to verify that all cited sources were included in the reference list and that all items in the reference list were used appropriately in the text. Stylistic inconsistencies in the referencing were identified and noted for author attention rather than directly corrected.

Although most revisions were completed using “track changes,” certain sections were highlighted for follow-up by the authors where clarification or content decisions were required.

Sincerely

Linda Harms Smith
