# *Why is it novel? Advantages:*

- ✓ It has been scientifically developed with PID & WRC
- ✓ There is a water seal – no odours, no visible pit, no trash into the pit, increase hygienic & acceptance factor
- ✓ Pit fills at one third of a VIP; multiple back-end options
- ✓ Pit able to be offset from structure – safer use = social acceptance
- ✓ No costly monthly maintenance or additives required = minimal user intervention
- ✓ Massive water savings! = cost saving @ municipal level
- ✓ Same price as a VIP: reduced pit size, less material [R600 Pour-flush & R800 Low-flush]

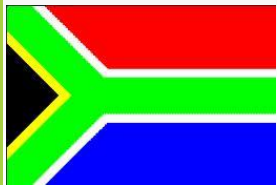

# Water savings explained

The harvesting and reuse of household Grey Water and Rain Water to flush the Eazi-Flush is the most sustainable solution available

Compared to full flush, Eazi-Flush uses 85 500 litres LESS per year in a household of 6 people

- R1155.00 saved per house per year (R13.50/kl)
- With 4 million toilets STILL TO DO in SA (DWS)
- Billions of Rand savings = more coverage possible

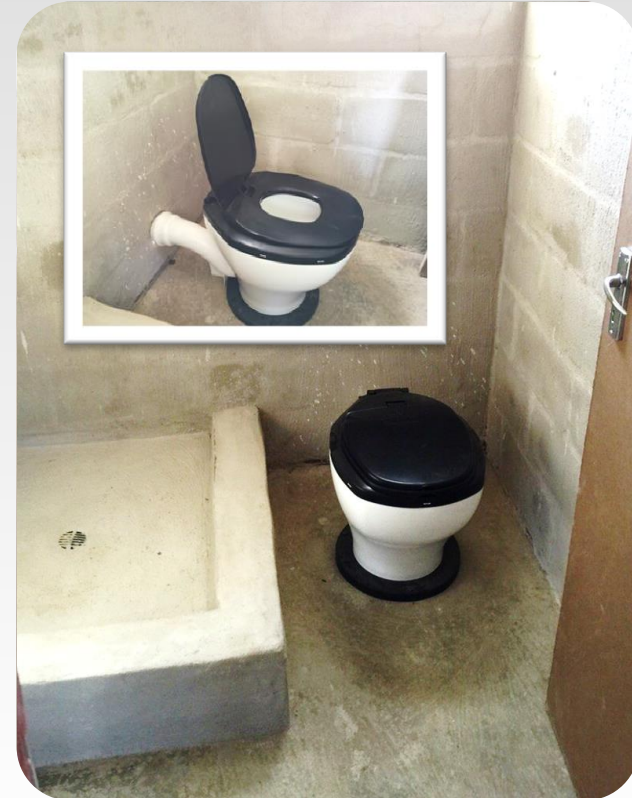

# *Where can it be used?*

**Block Unit,  
Pour-Flush  
Rural KZN**

**Pre-Cast Unit,  
Low-Flush  
Informal WC**

**Low-Cost Housing Unit,  
Low-Flush, KZN**

# Thank You
