2015 NATIONAL
SANITATION INDABA
It is not all about flushing

Overview

- Sanitation technology developments
- What are the key issues and challenges
- Why the need for technical/functionality assessment
- A framework in development

It is not all about flushing

Introduction to sanitation technology development

- Front end vs back end
- Complete onsite and offsite
- Dry vs wet (flushing)
- Low flush, micro flush
- Beneficiation toilets
- UD

SANITATION INDABA
It is not all about flushing

Processes involved

- Biological digestion and degradation
- Drying
- Dehydrating
- Composting
- Dessicating
- Catalytic
- Chemical
- Pyrolysis
- Carbonisation
- Combustion
- Solar treatment
- Thermal

SANITATION INDABA
It is not all about flushing

Issues and challenges

- Many of the technologies have potential, however the scientific and evidence based understanding of the technology is not well established.
- Costs of many of the technologies are unknown.
- Operational and design characteristics not well presented.
- Many aimed at user convenience
- Lack of standards and regulation
- Lack of certification and quality control
- Performance of systems not well provided

Wastewater vs Faecal Sludges

Species	Unit	Sewerage	Public toilet or latrine	Septage	WRC Faecal Sludge
Total solids	[%]	< 1 ^a	3.5 ^a	< 3 ^a	20 – 30
CODt	[mg O ₂ /litre]	500 -1,200 ^b	20,000 – 50,000 ^b	6,000 – 90,000 ^b	6,000 – 600,000
Total Nitrogen	[mg N/g wet sample]	30- 100 ^b		200 – 1,500 ^b	
Ammonia	[mg NH ₃ /litre]	20 – 75 ^b		50 -150 ^b	110 - 150
pH		6 – 9			6 – 9
Biodegradability	%	40 – 70			8 – 60 (layered effect)

It is not all about flushing

So what's the solution?

Strong regulation and enforcement

- Standards
- Certification

OR

Self regulation

SELF-REGULATION OF THE PACKAGE PLANTS/SWWTW INDUSTRY

Volume 1: Development of Proposed Framework of Standards, a Conceptual
Model for a Test Facility and an Accreditation System for Each
"New" Technology Provided by Suppliers

SANIC REVIEW

- Phase 1A: Quick Desktop Review
- Compendium of Sanitation Technologies Available
- Assessment of Technologies based on info supplied by private companies
- Main Findings:
 - Lack of evidence on performance
 - Lack of process functionality information
 - Financial requirements
 - Lack of user acceptability
 - We do not know limitations of technologies →
 - uncertainties of conditions under which toilets best operate.
 - Lack of an assessment framework

The need for an assessment tool

- Since there is no functionality assessment tool or protocol in existence.
- This is not the same as DSS tools
- Helps with regulating products and setting standards
- Eliminates the 'chancers'
- Builds a trusted sanitation industry
- Accelerates the uptake on good technologies
- Helps with investment and decision making

Draft Protocol for assessment– Standardisation of sanitation

- The sanitation protocol **must align with existing legislation and guidelines**
- 1. The expertise of the individual undertaking the assessment is considered for two parts:
 - **Sanitation functionality Assessment** undertaken by an individual with suitable expertise in wastewater treatment design. Other aspects of assessment can be undertaken by materials scientist or appropriate laboratory.
 - **Sanitation Suitability Evaluation:** undertaken by an experienced sanitation practitioner
 - physical environment
 - the institutional structure
 - supporting infrastructure.
- 2. **Standard design parameters** apply to onsite, household sanitation.

SANITATION INDABA
It is not all about flushing

- The sanitation protocol **must align with existing legislation and guidelines**
- Standard design parameters and loading rates to apply to onsite, **household** sanitation.
- The expertise of the individual undertaking the assessment is considered for two parts:
- **1) Sanitation Functionality Assessment**
 - Review of process design
 - Visual inspection
 - Field verification
 - Scientific testing
- **2) Sanitation Suitability Evaluation:** undertaken by an experienced sanitation practitioner
 - Physical environment
 - Institutional structure
 - Supporting infrastructure

Functionality Assessment

Figure 4.2: Process Design Assessment Criteria

IDENTIFY TREATMENT PROCESS							
Process	CHEMICAL		PHYSICAL	BIOLOGICAL		MECHANICAL	
Category	CHEMICAL	DRY SANITATION			WATERBORNE		
Example Technologies	Chemical Toilets Porta Potty	Pyrolysis Hydrothermal Carbonisation	Dehydration Desiccation Urine Diversion Bag Separation	AEROBIC Leach Pits Compost Toilets Activated Sludge Biofilm	ANAEROBIC Septic Tanks Biodigester ABR Bio-Augmentation	Membrane Ultrafiltration	
Process Tests	Loading Rates (Form B.1) & Sludge Accumulation Rates (Form B.2)						
	Water tightness (B.3)	Temperature (Form B.5)			Water tightness (Form B.3) Air tightness (Form B.4)	Water tightness (B.3) Filter Integrity (B.6)	
	Moisture content (Form B.7) Faecal Coliforms (Form B.8)			Determinant identified in Table 2.3 (Form B.9) (COD, TSS, E.coli, N, P etc.)			
Effluent Tests	Protozoa and Helminths (Where supplier claims waste is sanitised) (Form B.10)
